| GENERAL DESCRIPTION                | Frozen Camu Camu pulp is the product obtained through mechanical extraction of the fruit of camu camu, it is a homogeneous fluid with fruit flavor characteristics.                      |                                                                                                                     |
| PROCESS                            | Once receipted, washed, disinfected, selected, extruded and pressed, it is packed and weighed and delivered for export. The entire process is under adequate quality and health control. |                                                                                                                     |
